project_name: School Management System

project_description: School Management System will manage all the data of the school.

stakeholders: Employees, management, principle, student

stakeholder_responsibilities: Employees and Students should enter attendance, management will manage the whole system, principle will look after everything

target_audience: Employees, management, principle, student

project_objectives: Employees and Students should enter attendance, management will manage the whole system, principle will look after everything

estimated_budget: 10000.00

project_timeline: 1 week

data_management: ["Create", "Read", "Update", "Delete"]

rbac: yes

rbac_details: Employees and Students should enter attendance and can only see their attendance, management will manage the whole system, principle will look after everything

analytics: yes

analytics_details: the attendance of the employees and students and the expenses of the school and profit that school make.

user_stories: Employees and Students should enter attendance and can only see their attendance, management will manage the whole system, principle will look after everything

use_cases: Employees and Students should enter attendance, management will manage the whole system, principle will look after everything

performance_requirements: performance should be good.

usability_requirements: easy to use and understand.

reliability_requirements: reliable on mobile phones and computers

support_maintain: update after year

project_objectives: calculate math problems easily

estimated_budget: 1000.00

project_timeline: 1 day

data_management: ["Create", "Read", "Update", "Delete"]

rbac: no

rbac_details:

analytics: no

analytics_details:

user_stories: students and shopkeepers can calculate the problems fast and easily

use_cases: students can calculate math problems and shopkeepers can calculate also.

performance_requirements: fast response

usability_requirements: efficient

reliability_requirements: reliable

support_maintain: no need

created_at: 2024-11-14 20:21:39

id: 30

project_name: calculator software

project_description: calculator program that will calculate simple math problems

stakeholders: students and shopkeepers

stakeholder_responsibilities: calculate math problems

target_audience: students and shopkeepers

project_objectives: calculate math problems easily

estimated_budget: 1000.00

project_name: student data entry software

project_description: software data that will enter the students data.

stakeholders: students, teachers and administration

stakeholder_responsibilities: administration will enter the data of students, and teachers/students can read it.

target_audience: students, teachers and administration

project_objectives: software data that will enter the students data. administration will enter the data of students, and teachers/students can read it.

estimated_budget: 1000.00

project_timeline: 1 hour

data_management: ["Create", "Read", "Update", "Delete"]

rbac: yes

rbac_details: administration will enter the data of students, and teachers/students can read it.

analytics: no

analytics_details:

user_stories: administration will enter the data of students, and teachers/students can read it.

use_cases: administration will enter the data of students, and teachers/students can read it.

performance_requirements: accurate data storage and fast data fetching

usability_requirements: high quality software that will be usable.

reliability_requirements: reliable software

support_maintain: maintenance if needed.
